Claude Code Skills Guide

What each skill does and when it kicks in
Yousha Ahmed · November 2026

SKILL	WHAT IT DOES	KICKS IN WHEN YOU…
MY OWN		
web-liquid-glass NotYousha/claude-skills	Apple-style Liquid Glass for websites, built from the real ICNL site code: the four parts of the material, nine traps (double borders, Tailwind layers, Safari limits) and about 3,000 lines of working CSS and React.	add glass, frosted bars or capsule navs to a site, or fix glass glitches
WORKFLOW AND CODING		
Superpowers obra	A set of working habits for Claude: brainstorm before building, write a plan, test first, debug step by step, and verify before saying "done".	start any build, bug fix or feature
diagnosing-bugs mattpocock	A strict loop for hard bugs and slowdowns: reproduce, narrow down, prove the cause, then fix.	say "debug this" or report something broken or slow
Claude Code Setup Anthropic, official	Scans a project and recommends the hooks, skills, subagents and MCP servers worth adding. Read-only.	ask how to set up Claude Code for a project
claude-mem thedotmack	Memory across sessions: records what Claude did and feeds the useful parts back in next time. Uses extra tokens.	runs in the background every session
usage-limit-reducer Dubibubii	Reads your local usage logs, shows where tokens go, and gives the two to four fixes that matter for you.	hit your limit or ask how to save tokens
DESIGN		
apple-design dickwu	Design reviewer grounded in 123 pages of Apple's Human Interface Guidelines. Audits apps and screenshots for layout, accessibility and dark mode.	ask "review my design" or share a screenshot
Liquid Glass (SwiftUI) haider-nawaz	Apple's real Liquid Glass APIs for iPhone, iPad and Mac apps in SwiftUI. For native apps, not websites.	build or migrate an Apple app to iOS 26+
frontend-design Anthropic	Pushes UI away from templated defaults towards a clear visual direction, with deliberate type and colour choices.	build a new page or component
ui-ux-pro-max nextlevelbuilder	A large library of styles, palettes, font pairings and chart types across React, Next.js, Vue, SwiftUI and Flutter.	design or polish a site, dashboard or app
WRITING AND RESEARCH		
Humanizer blader	Edits AI-sounding text so it reads like a person wrote it, without changing the meaning.	ask to make text sound less like AI
humanize diaiq	A second rewriter aimed at passing AI detectors such as GPTZero and Turnitin.	ask to get text past AI detectors
Academic Research Skills Imbad0202	Full research-to-paper pipeline: literature reviews, citation checks, simulated peer review, revisions and abstracts.	write, review or revise an academic paper
Agent Reach Panniantong	Lets Claude read what normal web fetching can't: YouTube subtitles, Reddit, GitHub issues, Bilibili and more. Read-only.	paste a link Claude can't open on its own
SKILL MANAGEMENT		
find-skills vercel-labs	Searches for existing skills that fit a task, compares them and installs the ones you approve.	ask "is there a skill for…"
task-observer rebelytics	Watches your corrections and repeated work, then proposes small skill improvements. Nothing changes until you approve.	needs a line in CLAUDE.md to switch on

Before installing anything: skills run with full access to your computer. Scan each one first with NVIDIA's SkillSpector: `skillspector scan <GitHub link> --no-llm`. A high score means "read the flagged lines", not "malware". Install from the original GitHub repo, never from a copied folder, and never share your own `.claude` folder.
